ART UNIT PAPER NUMBER

2154

DATE MAILED: 10/20/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/734,273	Applicant(s) HARROP, THOMAS C.	
	Examiner Dustin Nguyen	Art Unit 2154	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 August 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-4, 6-16 and 18-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-4, 6-16 and 18-33 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☒ Claim(s) 34-36 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-4, 6-16, 18-36 are presented for examination.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 6-16, 18-33, drawn to network resource allocating, classified in class 709, subclass 226.
 - II. Claims 34-36, drawn to computer network monitoring, classified in class 709, subclass 224.
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as allocating or predicting hardware resource for future level of availability hardware resource based on the obtained historical data; and invention II has separate utility such as gateway for polling parameters according to polling interval for correcting resource problem. See MPEP § 806.05(d).
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2154

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. Newly submitted claims 34-36 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: see above.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 34-36 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-4, 7-16, 18, 19, 21-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liang [US Patent No 6,738,811], in view of Sampath et al. [US Patent No 6,892,317].

9. As per claim 1, Liang discloses the invention substantially as claimed including the method of automatically allocating additional hardware resources to a computer having a

Art Unit: 2154

plurality of hardware resources, said method comprising:

monitoring use of selected ones of the hardware resources by the computer to obtain historical data pertaining to the historical availability to the computer of each of the monitored hardware resources [i.e. monitoring computer components and keep history for each of the parameters being monitored] [Abstract; col 2, lines 21-32; and col 9, lines 28-38];

automatically analyzing, according to an analysis technique specific to each selected one of the hardware resources [i.e. plurality of parameters for each component being monitored] [304, Figure 3; and col 6, lines 15-30], the obtained historical data to arrive at a prediction of a future level of availability of a monitored hardware resource [i.e. analyzing the historic data to find out the trend from which a remaining time to a breakdown may be estimated] [col 2, lines 41-49; and col 8, lines 35-39]; and

providing a signal when the prediction of the future level of availability of the monitored hardware resource fails to meet an availability threshold [i.e. notification signal in abnormal condition when measured value is out of predefined range] [col 7, lines 37-46; col 8, lines 31-48; and col 9, lines 59-67];

automatically updating the analysis technique based on said signal [i.e. automatically consolidated data] [Figure 4B; col 7, lines 20-36; and col 8, lines 45-48];

without user intervention, responding to the signal by automatically reserving or ordering an additional physical hardware resource that is not in the computer when the signal is provided [i.e. ordering of replacement part] [col 5, lines 31-39; col 7, lines 52-65; and col 8, lines 41-45].

Liang does not specifically disclose

which is to be later manually physically added to the computer after the reserving or

Art Unit: 2154

placing of an order.

Sampath discloses

which is to be later manually physically added to the computer after the reserving or placing of an order [i.e. service require specialized technician] [col 7, lines 54-60; and col 8, lines 48-60].

It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Liang and Sampath because Sampath' teaching of manually adding of hardware resource would allow to resolve any complication of configuration of installation.

10. As per claim 2, Liang discloses performing at least one calculation with respect to certain of the obtained historical data [i.e. calculation based on a number of mathematical scheme] [col 7, lines 42-46].

11. As per claim 3, Liang discloses wherein said step of responding to the signal by automatically reserving or ordering occurs when the prediction indicates that the resources are below the availability threshold [col 8, lines 31-41].

12. As per claim 4, Liang does not specifically disclose without user intervention, enabling the reduction of the monitored hardware resources when the prediction indicates that the monitored hardware resources will not be required. Sampath discloses without user intervention, enabling the reduction of the monitored hardware resources when the prediction indicates that the monitored hardware resources will not be required [col 3, lines 50-61]. It would have been

Art Unit: 2154

obvious to a person skill in the art at the time the invention was made to combine the teaching of Liang and Sampath because Sampath's teaching of reducing hardware resource would allow to eliminate unnecessary resource in the monitoring process to reduce overhead and increase system performance.

13. As per claim 7, Liang discloses analyzing available applications with respect to the utilization by the available applications of the monitored hardware resources [i.e. monitoring plurality of applications, programs] [col 5, lines 11-30].

14. As per claim 8, Liang discloses the monitored hardware resources are selected from the set of resources, including memory, CPU, disk, available ports, and network resources [col 2, lines 38-42].

15. As per claim 9, it is rejected for similar reasons as stated above in claim 1.

16. As per claim 10, it is rejected for similar reason as stated above in claim 2.

17. As per claims 11 and 12, Liang does not specifically disclose adding the hardware resources to said computer from a remote location and removing the hardware resources from said computer. Sampath discloses adding the hardware resources to said computer from a remote location and removing the hardware resources from said computer [i.e. control command for re-configuration hardware] [col 9, lines 36-54]. It would have been obvious to a person

Art Unit: 2154

skill in the art at the time the invention was made to combine the teaching of Liang and Sampath because Sampath's teaching of reconfiguration hardware would allow to balance the workload of the resources.

18. As per claim 13, Liang discloses storing historical data on resource usage [i.e. data table] [Figures 4A-C and 6; and col 6, lines col 7, lines 20-36; and col 8, lines 12-20].

19. As per claim 14, it is rejected for similar reason as stated above in claim 7.

20. As per claims 15 and 16, they are apparatus claimed of claims 1, 2, they are rejected for similar reasons as stated above in claims 1, 2.

21. As per claims 18, 19, 21 and 22, they are apparatus claimed of claims 4, 13, 7 and 8, they are rejected for similar reasons as stated above in claims 4, 13, 7 and 8.

22. As per claims 23-28, they are apparatus claimed of claims 9-14, they are rejected for similar reasons as stated above in claims 9-14.

23. As per claims 29-33, they are program product claimed of claims 9-13, they are rejected for similar reasons as stated above in claims 9-13.

Art Unit: 2154

24. Claims 6 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liang [US Patent No 6,738,811], in view of Sampath et al. [US Patent No 6,892,317], and further in view of Johnson et al. [US Patent No 2003/0237016].

25. As per claim 6, Liang and Sampath do not specifically disclose the signal is in graphical form for each of the monitored hardware resources. Johnson discloses the signal is in graphical form for each of the monitored hardware resources [i.e. GUI] [paragraph 0096 and 0106]. It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Liang, Sampath and Johnson because Johnson's teaching of graphical interface would allow to managing monitored hardware resources in a quick and convenience manner.

26. As per claim 20, it is rejected for similar reasons as stated above in claim 6.

27. Applicant's arguments with respect to claims 1-4, 6-16, 18-33 have been considered but are moot in view of the new ground(s) of rejection.

28. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Conclusion

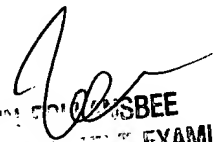

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dustin Nguyen whose telephone number is (571) 272-3971. The examiner can normally be reached on flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Follansbee John can be reached on (571) 272-3968. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
